deal» implied by the low-cost model. Can the low-cost model simply be transposed to long-haul carriers ? the LhLC model is based on the five key factors that have underpinned the success of low-cost carriers, and which have enabled them to capture an increasing share of the market and generate high returns. For example, the operating

Is long-haul, low-cost the future of flying?

In addition, a major constraint on long-haul low-cost is productivity. Short-haul low-cost carriers can sell an aircraft seat six or eight times a day. By comparison, despite unit cost reducing with range, long-haul carriers can only sell seats a maximum of twice. If the stage length goes beyond 10 hours, then it's only once in 24 hours.

CAN THE LOW-COST MODEL BE ADAPTED TO LONG-HAUL CARRIERS

On the other hand, De Poret et al. (2015), for example, conclude that a long-haul low cost operating model can be successful on routes that are in high demand or when sufficient feeder traffic can be found at either end of the route. They further state that transfer passengers from short-haul LCCs might be a viable source of demand.
