Functions assign outputs to inputs. Some functions have simple rules, like "for every  $x$ , return  $x^2$ ." However, there can be other rules that are more elaborate. For example, "If  $x < 0$ , return  $2x$ , and if  $x \geq 0$ , return  $3x$ ." These are called \*piecewise functions\*, because their rules aren't uniform, but consist of multiple pieces. A piecewise function is a function built from pieces of different ...
