The Pacific Ocean is just not ideal for air travel. Jet Streams. Another reason why planes don't fly over the Pacific Ocean is due to jet streams, which are a set of air currents that circle the Earth several miles above the planet's surface. These air currents predominantly flow West to East because of the Earth's rotation.

Why Don't Planes Fly Over the Pacific Ocean? - EXECUTIVE FLYERS

Oceans cover about 70 percent of the Earth's surface and about 97 percent of all water on and in the Earth is saline—there's a lot of salty water on our planet. By some estimates, if the salt in the ocean could be removed and spread evenly over the Earth's land surface it would form a layer more than 500 feet (166 meters) thick, about the height of a 40-story office building.

Why is the ocean salty? | U.S. Geological Survey
