Structure of Skeletal Muscle | SEER Training

Muscles of the Lower Extremity. The muscles that move the thigh have their origins on some part of the pelvic girdle and their insertions on the femur. The largest muscle mass belongs to the posterior group, the gluteal muscles, which, as a group, adduct the thigh. The iliopsoas, an anterior muscle, flexes the thigh. The muscles in the medial compartment adduct the thigh.

Web Anatomy Self Test | Web Anatomy

Even the middle ear takes part in the muscular system of the head and neck. In fact, the smallest muscle of the skeleton is the stapedius, which measures around 1 millimeter (1/20th of an inch) in length. The muscles of the middle ear contract to dampen the amplitude of vibrations from the eardrum to the inner ear.
