before the development of cinematography. Humans have probably attempted to depict motion as far back as the paleolithic period. Much later, shadow play and the magic lantern (since circa 1659) offered popular shows with projected images on a screen, moving as the result of manipulation by hand and/or minor mechanics.

Projectile motion is a type of motion experienced by an object that is projected near the Earth's surface and moves along a curved path under the action of the force of gravity only if the effects of air resistance are assumed to be neglected). This curved path was shown by Galileo to be a parabola. The study of such types of motion is called
