Rochester graduate Emma Chang '20 is a classically trained musician. She's also a YouTube star. The channel she created—ReacttotheK (@reacttotheK_official), named for the way classical musicians react to the music of K-pop—has grown to more than half a million subscribers and 250 million-plus views since launching in 2016. It was even featured on MTV's Facebook live show "Stan Accounts ...

Why health promotion matters to the COVID-19 pandemic, and ...

Bats are increasingly studied as model systems for longevity and as natural hosts for some virulent viruses. Yet the ability to characterize immune mechanisms of viral tolerance and to quantify infection dynamics in wild bats is often limited by small sample volumes and few species-specific reagents. Here, we demonstrate how proteomics can overcome these limitations by using data-independent ...

Bovine tuberculosis - World Organisation for Animal Health

Heat illness and diseases transmitted through food, water, and insects increase human risk as temperature rises. Acute awareness of these future impacts allows us to plan for the most vulnerable and adapt through response plans, health forecasting, and early warning strategies, including those that span transboundary contexts and systems.

Foot-and-mouth disease - Wikipedia

There is a general consensus that the SARS-CoV-2 virus is of animal origin, jumped species boundaries to infect humans either before or after it evolved to its current pathogenic state (Andersen et al., 2020), and could then very rapidly spread in a globalized economic system characterized by high levels of interconnectedness and mobility ...

Southern Great Plains - Fourth National Climate Assessment

Foot-and-mouth disease (FMD) or hoof-and-mouth disease (HMD) is an infectious and sometimes fatal viral disease that affects cloven-hoofed animals, including domestic and wild bovines. The virus causes a high fever lasting two to six days, followed by blisters inside the mouth and on the

feet that may rupture and cause lameness.. FMD has very severe implications for animal farming, since it is ...

EJAtlas | Mapping Environmental Justice

Established by the Food and Agriculture Organization of the United Nations (FAO) in 1994, the EMPRES-Livestock programme plays a major role in the fight against persisting and/or spreading transboundary animal diseases such as mad cow disease and avian flu at a global level, with emphasis on developing countries through international co-operation involving early warning, early reaction ...

African humid period - Wikipedia

The ocean is a key component of the Earth system (Chapter 1) as it provides essential life supporting services (Inniss et al., 2017 1).For example, it stores heat trapped in the atmosphere caused by increasing concentrations of greenhouse gases, it masks and slows surface warming, it stores excess carbon dioxide and is an important component of global biogeochemical cycles.

Atlas Of Transboundary Animal Diseases

The EJ Atlas is a teaching, networking and advocacy resource. Strategists, activist organizers, scholars, and teachers will find many uses for the database, as well as citizens wanting to learn more about the often invisible conflicts taking place. Please click the markers on the map for more information.

The African humid period (AHP, also known by other names) is a climate period in Africa during the late Pleistocene and Holocene geologic epochs, when northern Africa was wetter than today. The covering of much of the Sahara desert by grasses, trees and lakes was caused by changes in Earth's orbit around the Sun; changes in vegetation and dust in the Sahara which strengthened the African ...
