Biology is the scientific study of life. It is a natural science with a broad scope but has several unifying themes that tie it together as a single, coherent field. For instance, all organisms are made up of cells that process hereditary information encoded in genes, which can be transmitted to future generations. Another major theme is evolution, which explains the unity and diversity of life.

Obesity. The obesity epidemic has recently become a serious issue, particularly in industrialized nations. The goal set by Healthy People 2010 of reducing obesity in the United States to 15% was not met [1]. In fact, adult obesity increased to 35.7% in 2010 [2]. The rising number of obese individuals may be due in part to an energy-rich diet as well as insufficient physical exercise [3].
