tangent line at a particular point on the curve? The second problem, which motivates the next course, in integral calculus, is the area problem: given a

Calculus Textbooks :: Free Homework Help and Answers :: Slader

Answer: The equation for the tangent line is $y = L(x)$ where $L(x)$ is the linear approximation of $y = \ln(x)$ at $x = 1$. Using the formula $L(x) = f(a) + f'(a)(x - a)$ with $f(x) = \ln x$ and $a = 1$ and $f'(x) = 1/x$ we get $f(1) = \ln(1) = 0$, $f'(1) = 1$ and so $L(x) = 0 + 1 \cdot (x - 1) = (x - 1)$.

Where can I download the document Solution Manual for A ...

Understanding Calculus: Problems, Solutions, and Tips. Ever since its inception in the 17th century, calculus has spawned a continuing flood of new ideas and techniques for solving problems. It's easy to be overwhelmed by the richness of this subject, which is why many beginning students find themselves struggling.

7F9 Calculus A First Course Solutions Manual Mcgraw ...

Designed for undergraduate mathematics majors, this rigorous and rewarding treatment covers the usual topics of first-year calculus: limits, derivatives, integrals, and infinite series. Author Daniel J. Velleman focuses on calculus as a tool for problem solving rather than the subject's theoretical foundations.
