Chemical castration - Wikipedia

Where dog castration is advised for behavioural reasons, it might not be obvious until 1-2 years of age that there is a need for it. When castration is carried out later in life, the positive changes might not be quite so great, but your dog is never too old to castrate if there is a medical reason for it, like a testicular tumour.

FDA grants Priority Review for investigational targeted ...

Chemical castration is castration via anaphrodisiac drugs, whether to reduce libido and sexual activity, to treat cancer, or otherwise. Unlike surgical castration, where the gonads are removed through an incision in the body, chemical castration does not remove organs, nor is it a form of sterilization. Chemical castration is generally considered reversible when treatment is discontinued ...
