ZzzQuil Nighttime Sleep-Aid: What Are the Side Effects?

Sepsis is a life-threatening condition that arises when the body's response to infection causes injury to its own tissues and organs. This initial stage is followed by suppression of the immune system. Common signs and symptoms include fever, increased heart rate, increased breathing rate, and confusion. There may also be symptoms related to a specific infection, such as a cough with pneumonia ...

Sepsis - Wikipedia

For a hysteroscopy, your doctor guides a lighted tube through your cervix and into your uterus. This helps the doctor see inside your uterus. For a dilation and curettage (D&C), your doctor uses a curved tool, called a curette, to gently scrape tissue from your uterus. After these procedures, you are likely to have a...
