ProProfs Key

Tectonic plates are around 62 miles thick. There are two main types of tectonic plates: oceanic and continental. Oceanic - Oceanic plates consist of an oceanic crust called "sima". Sima is made up primarily of silicon and magnesium (which is where it gets its name). Continental - Continental plates consist of a continental

Answer Key

**Regents Earth
Science Resources:
Plate Tectonics**

Tectonic plates are made of both oceanic and continental crust. The plate itself is made up of rock and lies thousands of miles underneath the ground. Tectonic plates can also move and crash against each other (causing mountains to form) or
