## **Gearbox - Formula 1 Dictionary**

A sequential manual transmission (or sequential manual gearbox) is a non-traditional type of manual transmission used on motorcycles and high-performance cars for auto racing, where gears are selected in order, and direct access to specific gears is not possible.. With traditional manual transmissions, the driver can move from gear to gear, by moving the gear lever to the appropriate position.

## **Electrohydraulic manual transmission - Wikipedia**

For many years it was the convention on F1 cars to locate the gear clusters behind the differential, for ease of access in order to change gear ratios, although this compromised weight distribution and aerodynamic performance. The current trend, with the gear clusters at the front end of the gearbox, means that the gearbox must be removed to change the gear ratios.
