variables with exponents in expanded form. List all factors—matching common factors in a column. In each column, circle the common factors. Bring down the common factors that all expressions share. Multiply the factors.

Factoring a Greatest Common Factor (GCF) Drag and Drop ...

Factoring Using GCF: To factor using a GCF, take the greatest common factor (GCF), for the numerical coefficient. When choosing the GCF for the variables, if all terms have a common variable, take the ones with the lowest exponent. Example: $9x^4 + 3x^3 + 12x^2$ GCF: Coefficients = 3. Variables (x) = x^2 . GCF = $3x^2$
