Model and Generate Geodatabase Schemas. Visual modeling of geospatial databases can help to improve productivity. Enterprise Architect now includes Sparx Systems' UML profile for ArcGIS. Simply drag and drop ArcGIS feature types onto a diagram and visually connect these elements, just as you would for a UML Class diagram.

The architecture of a geodatabase - ArcGIS Desktop

ArcGIS Diagrammer. ArcGIS Diagrammer is a productivity tool for GIS professionals to create, edit or analyze geodatabase schema. Schema is presented as editable graphics in an environment

familiar to users of Microsoft Visual Studio.

ArcGIS Diagrammer - Demonstration Video
ArcGIS Diagrammer is kaput after 10.2 and never was better than the other options in my opinion, and Geodatabase Diagrammer is awesome, but getting it to work is nightmare. Little documentation to work through all the bugs/install process and confusing blog entries and multiple versions makes what should be a simple process turn into a wasted day.

ArcGIS Help 10.1 - Documenting your geodatabase design
The Geodatabase library provides the application programming interface (API) for the geodatabase. The geodatabase is a repository of geographic data built on standard industry relational and object relational database technology. The objects in the library provide a unified programming model for all supported data sources in ArcGIS.
