Harley 88b Engine

As the company determined that a rubber-mounted Softail would affect the line's visual styling, Harley solved the issue by designing an engine variant known as Twin Cam 88B. [4] [5] It is basically the same engine as the original (now retroactively referred to by enthusiasts as "Twin Cam 88A"), but with a modified engine block design that incorporates twin chain-driven balance shafts . [6]

Harley Engines - Harley-Davidson Engines | HowStuffWorks

In 2000 the Twin Cam 88B was introduced specifically for the Softail line, with a pair of small balance shafts mounted in the engine cases, in front of and behind the crank. This system eats up about three horsepower, and adds 14 lbs to the engine, but reduces vibrations by 90%.

Twin Cam 88, 95, 96, 103 and 110 CID engines

Harley also knew that a solid-mounted Twin Cam 88 engine would create too much vibration. The Factory's solution was the new Twin Cam 88B motor. The Twin Cam B-motor differs from an A-motor in that it has two counter-rotating balancers, one fore and aft of the flywheel assembly, that, together with the flywheels, negate nearly 100 percent of the engine's primary vibration.
