DT 2010 ...

They have the replaced the IPR valve twice, the ICP sensor, and the high pressure oil line. The last time it was in (last week) they replaced the exhaust brake sensor claiming that it had excessive leaking, but that does not seem to have solved the problem either. Hope this will help you some.

but that doesn't mean anything. When the bus cools down then it'll start. I'm gonna order another ICP sensor and try it again! The ICP sensor is giving a false reading while the engine is not running but with the engine running it reads right according to ServiceMaxx.

Have another Maxxforce DT in the shop, unit has no power and no codes, road testing and looking at data seeing high EBP and low boost, all other engine operation checks seem good, icp, ipr, fuel pressure etc and runs smooth and sounds good, just put accelerator to floor and it doesn't build power

Diagnostics If engine-cranking speed is below spec, check the starting and charging systems. If fuel delivery pressure is below specification, refer to the fuel system special test procedures. If injection control pressure is below specification, perform the ICP Open Loop test in Special Test Procedures.

Maxxforce

The ICP Sensor reads the Pressure of the Engine High Pressure oil system. The Ford Power stroke, Navistar International and the Caterpillar engine use these type of sensors. The engines ECM uses this information to command the correct signal to the fuel injectors that will meter fuel delivery to the Engine.
