Life Ascending: The Ten Great Inventions of Evolution ...

Nick Lane's Life Ascending recounts the latest version of the still-being-edited story of life unfolding, using as a focus the origin of life and the "invention" of DNA, photosynthesis, the complex cell, sex, movement, sight, hot blood, consciousness, and death which Lane cheekily refers to as "the ten great inventions of evolution." Cheeky because one must be careful in associating "invention" with evolution.

Life Ascending: The Ten Great Inventions of Evolution ...

According to Lane, "the ten great inventions of evolution" are: The origin of life, DNA, Photosynthesis, The complex (eukaryotic) cell, Sex, Movement, Sight, Hot blood, Consciousness, and Death. He could, of course, have made another selection of these "great inventions," but on the whole they seem to be very well chosen, especially if one focuses on biological evolution.

ture, including the biochemical reactions that underpin life. Over the small range of biologically meaningful temperatures, from around 0°C up to 40°C in animals, the difference in performance is striking. Oxygen consumption, for example, doubles with every 10°C rise in temperature in this range, corresponding to mounting stamina and power.

01 Life Ascending - National Center for Science Education

All complex life on Earth is composed of nucleated cells, known as eukaryotic cells. The eukaryote arose only once, and bacteria normally show no tendency towards morphological complexity. The last common ancestor of eukaryotic cells was a chimera, formed in a unique union between two prokaryotic cells called endosymbiosis -- a non-Darwinian mechanism whereby organisms converge rather than diverge.
