Assessing Nasogastric (NG) Tube Placement | Geeky Medics

The longitudinal fissure (or cerebral fissure, great longitudinal fissure, median longitudinal fissure, interhemispheric fissure) is the deep groove that separates the two cerebral hemispheres of the vertebrate brain.Lying within it is a continuation of the dura mater (one of the meninges) called the falx cerebri. The inner surfaces of the two hemispheres are convoluted by gyri and sulci just ...

Hemodynamics - Wikipedia

Testing pH of NG aspirate. Confirmation of safe NG tube placement can be achieved by testing the pH of NG tube aspirate.. Gastric content has a low pH (1.5-3.5) whereas respiratory tract secretions have a much higher pH.² This difference makes it possible to confidently confirm the safe placement of an NG tube using pH testing alone if the pH is within a safe range (typically 0 – 5.5).¹

This is a personal recommendation and the one that's frequently used in most universities. Anatomy is learned through visualization of body structures.Thus, being an atlas, Netter's book is the best for learning anatomy in medical school. Best-selling and most popular, it contains hundreds of illustrations of the human anatomy—from the smallest blood vessel and nerve to the largest organ.

Cardiovascular System Anatomy: Overview, Gross Anatomy ...

Hemodynamics or haemodynamics are the dynamics of blood flow.The circulatory system is controlled by homeostatic mechanisms of autoregulation, just as hydraulic circuits are controlled by control systems.The haemodynamic response continuously monitors and adjusts to conditions in the body and its environment. Haemodynamics explains the physical laws that govern the flow of blood in the blood ...
