The probability that the first horse wins is  $\frac{2}{7}$ .

The probability that the second horse wins is  $\frac{3}{10}$ . Since the events that the first horse wins and the second horse wins are

mutually exclusive, the probability that either the first horse or the second horse will win is  $\frac{2}{7} + \frac{3}{10} = \frac{41}{70}$ . I
