I want to write a code in python to solve a sudoku puzzle. Do you guys have any idea about a good algorithm for this purpose. I read somewhere in net about a algorithm which solves it by filling the whole box with all possible numbers, then inserts known values into the corresponding boxes. From the row and coloumn of known values the known value is removed. If you guys know any better algorithm ...

The sudoku. The square from the Sudoku when $x = 1$ and $y = 1$. I want to check the number of each square from the Sudoku and enter it to an array. And if there is no number return 0. It's have to look like this:

Sudoku - Medium

Sudoku is based on logic, so guessing won't get you very far. In fact, each Sudoku puzzle has only a single solution. For more complex puzzles, advanced solvers often scribble in possible solutions with small numbers so they can refine their solution in less time than a non-documented approach. Tip 4: Be patient.

If the Sudoku puzzle manufacturers didn't have to print the answer key in the back of the book and instead provided an app for users to check their puzzles, the printers could either pocket the savings or print additional puzzles at no cost. The Sudoku puzzle company makes more money, and the end users are happy. Seems like a win/win.
