What is the difference between unit operation and unit process

and Unit Process (chemical treatment) to produce economically a desired product from specific raw materials. The raw materials are treated through physical steps to make it suitable for chemical reaction. So, knowledge of unit operations like 'Mixing and agitation of liquid' and' heat flow' is very much necessary. The subject Unit Operations is based on fundamental laws, physicochemical principles. Unit

Large processes are broken into unit operations in order to make them easier to analyze. The key thing to remember about them is that the conservation laws apply not only to the process as a whole but also to each individual unit operation. The purpose of this section is not to show how to design these operations (that's a whole other course) but to give a general idea of how they work. Separation Processes
