The 50 percent of the sun's radiation that reaches the Earth is converted into infrared radiation, or heat. Clouds and greenhouse gases — atmospheric components such as water vapor and carbon dioxide (CO₂) — absorb the heat reflected by the Earth and radiate it back again so that a balance is created.

World Geography - Chapter 9 Flashcards | Quizlet

With 107 million people, Mexico is the world's most populous Spanish-speaking country. A population density of 142 people per square mile (54 per sq. km) suggests a relatively uncrowded country. This figure is only an average, however. In Mexico City, more than 19 million people live within an area of 597 square miles (1,547 sq. km).

Chapter 2 47. The total amount of water on the earth does not change, but the earth's water is constantly moving—from the oceans to the air to the ground and finally back to the oceans. The water cycle is the name given to this regular movement of water. The diagram above shows the major parts of the water cycle.
